Exploring the Value of Strategic International Science Engagement

presented by

Elizabeth Lyons

National Science Foundation's Office of International Science and Engineering (OISE)

Interim Head, Tokyo Regional Office

OISE Program Director

Elizabeth (Libby) Lyons serves in the National Science Foundation's Office of International Science and Engineering (OISE) where she works to help American institutions, scientists, and students build international networks and collaborations. She has also been active in engaging university leaders on strategic approaches to international scientific research and education at institutional and state levels. Lyons has served at NSF in many capacities over the last twenty years and writes about the importance of U.S. academic international science and technology engagement. Her most recent publication is "How Collaborating in International Science Helps America," published in 2016 in Science & Diplomacy.
